

| Component       | Purpose                          | Key Points                                     |
|-----------------|----------------------------------|------------------------------------------------|
| VPC             | Private network in AWS           | Single VPC, single subnet for all 3 VMs        |
| Subnet          | IP range inside VPC              | Same subnet so all VMs are “neighbors”         |
| Security groups | Virtual firewalls for instances  | Separate SGs per role, allow only needed ports |
| EC2 instances   | Your 3 VMs (Windows, SQL, Email) | Launched into same subnet                      |
| IAM & key pair  | Access & login                   | Control who can manage and log in              |
